FORM B

Part 1

Aim of the event:

The main aim of this industrial visit was to make the students aware about the practices being followed in Honda to manage their resources and operations. The visit was also planned to educate the students about the Supply system and how the demand is met and to impart them the practical exposure for the subjects the theoretical subjects taught to them.

Part 2

Abstract:

With the aim to help the students gain latest first-hand information regarding functioning of the Industry and engaging them in active learning experiences outside the classroom, an Industry visit to Honda Cars Pvt Ltd, Greater Noida was organized On February 13, 2018 for students of MBA-II (Morning) Section B. 43 students along with 2 faculty members went for the visit to gain the practical exposure about the process followed at Honda Cars.

The students were given a very warm welcome by Mr. Sumit Kapoor, HR manager, Honda Cars India Ltd . The visit started with a welcome address by the company official followed by the visit to the workshop. The students were first taken to the workshop of the company wherein they were briefed by the members of HR department about different stages used in making of a car which included welding, painting, assembly frame, engine assembly, vehicle quality, etc.

They also explained the complete layout of their workshop. At Honda, all the management functions are being practiced i.e. Planning, Organizing, Directing, Staffing and Controlling. Without any of these it would not have been possible to achieve quality and excellence in the working of the company. The process of making of Honda cars is totally automated and is internationally designed.

The students were enthusiastic about this visit and were enriched on the ways the company functions and understood on ground about the as to how synergy between various departments take place. They were made aware about the innovations that are taking place in the company.

After the visit, a video was shown to the students which includes included a brief introduction about the company, detailed description about the product and its benefits. This was followed by an interactive session wherein students asked questions from the manager related to manufacturing process, HR policies, plant layout etc., and were answered by the manager very patiently.

It was a lively and interactive session which the students thoroughly enjoyed. The students were served with tea and snacks at the end of the visit. It provided an insight into the real working environment of the Industry and an opportunity so that students can plan, organize and engage themselves in active learning experiences.

Part 3

Conclusion

This industrial visit gave a clear understanding to the upcoming managers who were quite enthusiastic about this visit. Overall, it was a great learning beyond the classroom experience for students who learnt about the functioning of various departments.

The overall experience was good, knowledgeable and enriching for both the students and the accompanying faculty members.
