Certified Institute

Guest Lecture on “Advanced ASP.NET with C#”

Topic :	Practical Implementation of software skills development by Mr. Naresh kalra, director of PROUD TECHNOLOGIES” and his team.
Date of event :	April 8 , 2013
Aim of the Event :	The aim of this session was to make the students aware about various applications of ASP.NET development tools in today’s environment. Also about the importance of information sharing, example sharing, module development The session aimed at inducing into students the importance of software skills development.
Description of the event :	The trainer started the session by making students aware about the latest market trends, the changing and challenging demands of customers. He displayed few of their companies’ successful achievement s like “HOPE EK ASHA”, a Dynamic website developed for some NGO. Then he displayed another website developed by their company for High Court which was a real surprise both for the students and faculty, as it was a virtual tour of high court .Then he started with the session.

Following topics were covered during the lecture:

- ✚ **C#** is a more high-level approach than C++. It is usually faster to develop in. It comes with a large framework of pre developed components, which makes it particularly useful for server-side programming. It is full of features that make development faster and easier, usually at the cost of flexibility and/or runtime performance..
- ✚ **Basic CMS for .NET** An easy to setup and use, no-frills content management system with asp.net and MS Access. If you need to setup a small site, or quickly add some pages to an existing site, or let someone else update pages on your website. This simple system was the quick answer.
- ✚ **Google glass** It's your Smartphone, right in your eyes. You can read text messages. You can take photos. You can listen to music (thanks to some built-in ear buds). You can even be told that the subway is closed as you walk up to it, and be redirected to your destination by foot.

Session was quite interesting and interactive. The team booked one domain for one of our student of MCA-IV free of cost. The session ended by asking students to fill feedback form. Students filled the forms with full enthusiasm.
