

“Guest Lecture on Enterprise Java Beans & Client Server Architecture”

Topic :	Concepts of Enterprise Java Beans & Client Server Architecture, delivered by Mr. Deepanshu Chopra, Technical Team Lead at IBM Gurgaon
Date of event :	November 25, 2012
Aim of the Event :	The aim of this event was to make students aware about Enterprise Java Beans. The EJB specification is one of several Java APIs in the Java EE specification. EJB is a server-side model that encapsulates the business logic of an application. The event was really beneficial for those who want to be an Application Developer in future.
Description of the event :	<p>The speaker started his lecture by discussion basic concepts of Application s/w, System s/w, server, Client etc with the students.</p> <p>Sir covered the following topics during his lecture:</p> <ul style="list-style-type: none">✚ Client Server Model✚ Java Beans Vs EJB✚ Containers✚ Deployment Descriptor✚ Java Naming Directory Interface <p>Sir explained the practical Implementation of all the concepts and also gave an assignment to the students to check their knowledge.</p>
