

### Web Report on CTP Activity on “Problem Solving in Groups”

<b>Title</b>	CTP Activity on “Problem Solving in Groups” for MBA I Shift, I Semester
<b>Date</b>	October 9- October 10, 2017
<b>Resource Person/Facilitator</b>	Ms. Sonam Goel
<b>Summary</b>	<p>This activity was conducted under the “Dynamics of working in teams” module for the MBA students. Under this module, students were taught the mechanisms of working in teams which include, showing team spirit, respecting each other’s opinions, benefits of brain storming, importance of solving problems and finding solutions as a team, etc.</p> <p>Since it was a team activity, students were divided into teams of 6-7 members. After which they were given an organizational problem. Student’s task was to work cohesively with their team members and find one optimum solution to the problem. The procedure of finding the solution needed the students to brain storm about all possible perspectives to the problem, listing down the options, short listing the options by writing down their pros and cons and finally selecting one best solution to the problem and the required action.</p> <p>This activity helped the students to understand the importance of finding integrative solutions to problems together as a team. To become a successful corporate professional, our students need to learn that not everything is what it looks like, and all possible perspectives needs to be considered for understanding the problem well. Only then the solution will be best, and this goal can best be achieved as a team and not as an individual.</p>
